SITUATION SUMMARY

Cal OES SOUTHERN REGION

Virulent Newcastle Disease (VND) in backyard poultry and avian in Los Angeles, San Bernardino, and Riverside Counties

The California Department of Food and Agriculture (CDFA) has detected virulent Newcastle Disease (VND) in chickens in Los Angeles and San Bernardino Counties.

- On 05/16/18, CDFA detected VND in a small flock of backyard exhibition chickens in Los Angeles County, and confirmed on 05/17/18 by the United States Department of Agriculture's (USDA) Animal and Plant Health Inspection Service (APHIS).
- On 06/27/18, CDFA detected VND in backyard exhibition chickens in Riverside county and was confirmed on 06/30/18 by USDA APHIS.
- CDFA is the state lead on the incident, with support from Cal OES and in collaboration with USDA.
- USDA Incident Management Teams (IMTs) continue to rotate every two weeks to facilitate the management and support the response to the incident. The Gold IMT transition into a two week rotation beginning 07/01/18.
- CDFA confirmed there are no commercial premises currently involved and there is no public health risk due to this virus. Commercial surveillance actively continue to work with commercial premises in the surveillance zones on biosecurity to help protect their poultry from VND.
- USDA IMT is working with commercial poultry premises to encourage submission of samples for VND surveillance testing, facilitate the development of Secure Food Supply Plans, and assist with the issuance of permits to move materials on and off commercial premises within established control areas.
- Backyard Surveillance (education and outreach) continues in the surveillance zones.
- CDFA and USDA have scheduled a meeting on 07/10/18 with representatives from Animal Care and Control Agencies in San Bernardino, Los Angeles, Ventura, Riverside and Orange counties to provide information on the current efforts CDFA and USDA are implementing to control and eradicate VND in San Bernardino County and surrounding areas. The goal is to strengthen partnerships with as many agencies as possible to carry out the mission of stopping the spread of VND and eradicating this devastating disease.

Declaration

- On 06/26/18 at 1840 hours, the California State Warning Center (CSWC) received a report regarding Virulent Newcastle Disease (VND) from the California Department of Food and Agriculture (CDFA). CDFA has declared an Agricultural Emergency to provide the department the authority to activate internal emergency provisions and to expedite the request for permits and waivers required to perform designated activities under an emergency basis.

Quarantine

- The California Department of Food and Agriculture State Veterinarian has established an animal (defined poultry species) and animal products quarantine in designated disease control areas in the counties of San Bernardino and Riverside. The State Veterinarian's quarantine powers per the Food and Agriculture Code (Section 9562) includes the power to order movement, segregation, isolation, or destruction of animals or food products, as well as the power to hold animals or food products in place. The quarantine is effective Monday, 07/09/18.

WEATHER OF CONCERN

Weather of Concern

Northern California:

- An upper trough/dry front will move through the area later this afternoon and evening. Gusty west to southwest winds (gusts of 20 to 30 mph) and very low relative humidity will combine to produce critical fire weather conditions. The most critical time period will be between 1400 to 2100 hours. Any new or existing fires in these areas will have the potential to grow rapidly.

Southern California:

- Thunderstorm activity will continue this week, mainly during the afternoons and mostly confined to the mountains and deserts. However, all areas may see thunderstorms particularly Monday night through Tuesday. Flash flooding potential will exist with stronger, more stationary storms. Potential impacts include localized flooding, lightning, small hail and gusty winds.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*** High Risk for Gusty SW Winds/Low Relative Humidity (RH) Far Eastside This Afternoon ***

*** Increasing Thunderstorm Chances South of Lake Tahoe Wednesday and Over the Higher Terrain All Areas Thursday through Saturday ***

A low pressure trough remains just off the west coast and strong high pressure is building over the Rockies, the 4-Corners states, and into Southern CA. The trough will move off to the NE today and produce one last day of gusty afternoon SW winds. Inland areas outside of the influence of the shallow marine layer will be dry and warm. Areas from the Cascade-Sierra crest east will see minimum RH drop to 7-15% and SW gusts to 25-30 mph this afternoon, while the remainder of the region only sees typical summer winds. Late this afternoon and evening SW-NW sea breeze winds will gust to 25-35 mph through the coastal range and into the western Sacramento Valley in the typical areas. Northerly winds with gusts to 20-25 mph will develop in the northern and western Sacramento Valley and nearby foothills late tonight and early Tuesday.

Tuesday will be mostly sunny, hot and dry with no thunderstorm threat. Subtropical moisture moving in from the south on Wednesday will bring a slight chance of thunderstorms as far north as Hwy 50 in the Sierra. Isolated thunderstorms are possible over the higher terrain throughout the region Thursday and Friday, and in our northeastern areas Saturday. Although storms will produce more rainfall beginning Friday, new ignitions are likely. Strong high pressure building overhead beginning this weekend will bring thunderstorm chances to an end and start a period of very hot and dry weather with light winds.

SOUTHERN CALIFORNIA

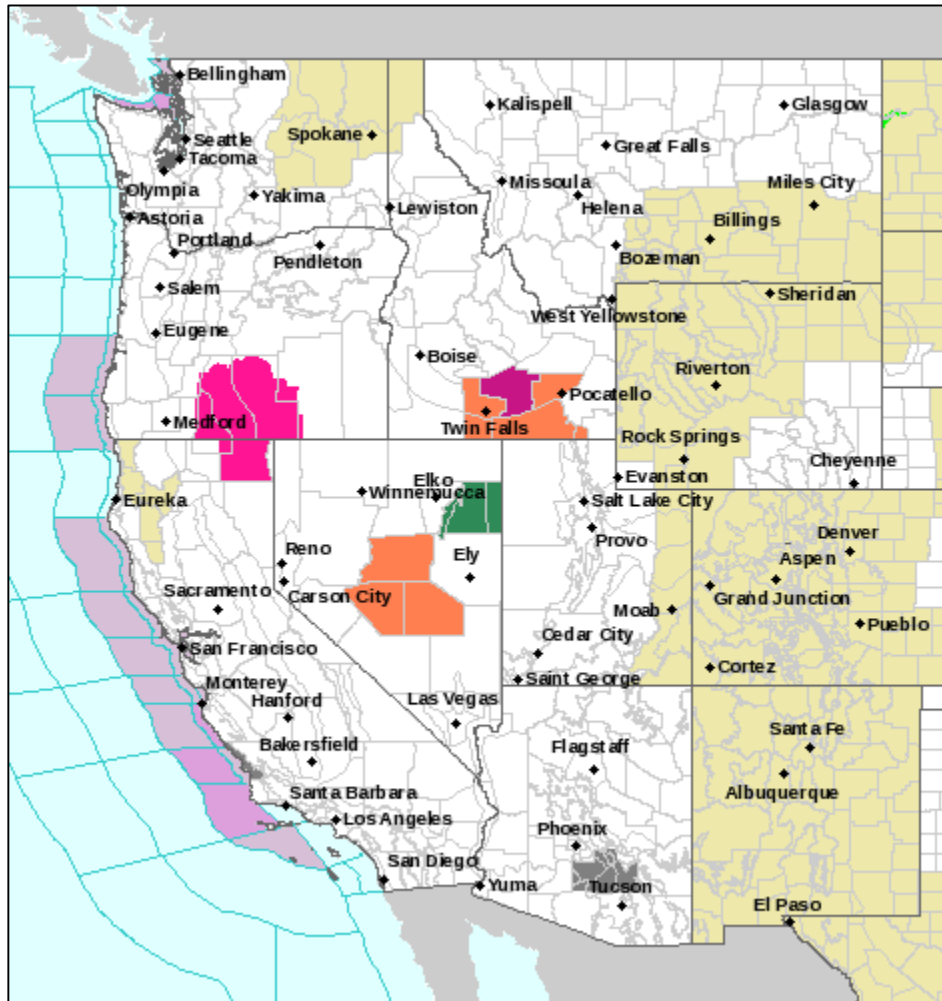

Daily thunderstorms mainly over the mountains and deserts through this weekend

Hot and very dry across most of Central California today

Isolated to scattered showers and thunderstorms will continue to form mainly over the mountains and deserts each day through this weekend. It still seems as though the most activity will occur on Tuesday and Wednesday when a disturbance moves across Southern California in the east to southeast flow aloft. It is possible that the shower and thunderstorm activity will move into the coastal and valley locations of Southern California Tuesday and Wednesday. Strong high pressure aloft will bring one more hot and very dry day to Central California, with temperatures in the valleys between 100 and 110 degrees and minimum humidity in the single digits. Abundant cloud cover will keep Southern California valleys cooler with highs in the 90s. Mountain temperatures will be in the 80s to low 90s today. Cloud cover will move into the coastal and valley locations of Central California Tuesday causing temperatures to cool there. Temperatures will be near to a little above normal across the region Tuesday through this weekend, with 80s to low 90s across the mountains and 90s to 102 in the valleys. Minimum humidity will increase across Central California into the teens Tuesday and then most of the region will see minimum humidity above 20% starting Wednesday. Strong downdraft winds will occur with thunderstorms, otherwise winds will be light through this weekend.
